-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 10 - 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over March (USPGPub 2001/0034500) in view of DiCesare et al. ("Wavelength-ratiometric probes for saccharides..." - cited by Applicant). March teaches an ophthalmic lens incorporating a receptor moiety for determining the amount of an analyte, including glucose, in ocular fluid (Figures 1, 2A, 2C). The lens can be a removable or implanted lens (paragraphs 0005 - 0008), receptor moieties can include boronic acid derivatives (paragraphs 0011 - 0013), and the lenses can be constructed using conventional methods with the receptor moiety covalently bound to the lens material (paragraphs 0024 - 0026) and can comprise a polymer material (paragraphs 0041 - 0043). March teaches all of the features of the claimed invention except for the particular sensing moiety of the claims. Di Cesare teaches an alternate boronic acid-based glucose sensor (p. 40, see text and Fig. 1), having properties (p. 42, section 3.1) consistent with the requirements of March. It would have been obvious to one of ordinary skill in the art at the time of the invention to implement the lens of March with the sensing moiety of Di Cesare, since March teaches that boronic acid derivatives may be used for the moiety and Di Cesare teaches one such sensing moiety.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ERIC WINAKUR whose telephone number is (571)272-4736. The examiner can normally be reached on M-Th, 7:30-5; alternate Fri.
